Research title: Adaptation to Climate Change: the Attitude and Behaviour of Rice Farmers in the Mekong Delta, Vietnam

Abstract: This thesis investigates the attitude and behaviour of rice farmers in response to climate change in the Mekong Delta, Vietnam. Qualitative and quantitative analyses, including structural equation modelling, were applied to 600 face-to-face farmer interviews, supplemented by focus groups and agricultural officer interviews. The conceptual framework, developed from protection motivation theory, incorporates socio-economic and psychological factors. Understanding farmers' adaptive behaviour requires knowledge of factors including perceived risks of climate change and perceived effectiveness of adaptive measures, which in turn are affected by socio-economic and psychological variables. The results improve understanding of farmers' adaptation and offer policy implications for adaptation strategies.
